Education

Bennett University

B.Tech in Computer Science (Data Science)

CGPA: 9.1

CBSE (Class XII)

Percentage: 93%

CBSE (Class X)

Percentage: 91%

Aug. 2023 – Jun. 2027

Greater Noida, India

2022

2020

Experience

Gradeless AI

Software Engineering Intern

Jun. 2026 – Jul. 2026

Hybrid

- Diagnosed a dead-code analytics bug in the production course player and implemented **8 PostHog conversion funnels** (search, onboarding, resume, cover letter, role-play, notebook, payments, briefs) across a **Next.js/React** frontend, from spec to merged PR.
- Instrumented **18+ analytics event fire sites** across a **React Native** mobile app and Python backend for a voice-note capture lifecycle, verified via static type-checking with zero regressions before review.
- Designed a build-ready spec for a **RAG-based domain-interest engine** using **OpenAI embeddings** and cosine similarity over **Supabase/pgvector**-stored vectors across a 10-domain taxonomy.
- Maintained a dual-identity **Git/SSH** workflow and shipped work through a branch → PR → review → deploy pipeline across three feature branches spanning frontend, backend, and mobile.

Projects

Phishing Website Detection System

Python, XGBoost, Flask

- Developed an end-to-end machine learning pipeline to detect phishing URLs using **100K+ real-world samples**.
- Designed and engineered **30+ lexical, domain, and content-based features** to improve model performance.
- Achieved **95%+ accuracy** with a strong precision-recall balance using XGBoost.
- Deployed the model via a Flask API, enabling real-time predictions with latency of **< 200 ms**.

Grocery Sales Analytics & Forecasting

Python, Pandas, Matplotlib

- Conducted exploratory data analysis on **20,000+ transactions** to uncover sales trends and seasonal patterns.
- Cleaned and transformed data, handling missing values and improving overall data quality.
- Derived actionable insights that could improve demand planning and reduce stockout risk by **15–20%**.
- Built visual dashboards to analyze category-wise and store-level performance.

Café Management System

Java, MySQL, JDBC

- Built a database-driven application to streamline order management, billing, and inventory tracking.
- Designed a relational database schema and implemented efficient CRUD operations using JDBC.
- Enabled tracking of daily sales and inventory usage for better operational visibility.
- Reduced manual billing errors by introducing a structured and automated workflow.

Technical Skills

- **Languages:** Python, Java, SQL
- **Core Concepts:** Data Structures & Algorithms, OOPs, DBMS
- **Data Science & ML:** Data Analysis, Machine Learning, Artificial Intelligence, Feature Engineering.
- **Web/Deployment:** Streamlit, HTML, CSS, JavaScript
- **Databases:** MySQL, PostgreSQL, Hadoop, Supabase (pgvector)
- **Developer Tools:** Git, GitHub, Jupyter Notebook, PostHog, RAG/LLM Embeddings

Achievements

- Recognized with the **Dean's List (Stellar Academic Excellence Award)** for consistently high academic performance.
- Maintained strong academic consistency with SGPA's of **8.59, 9.52, 9.25, 9.15** across semesters.
- Solved **100+ Data Structures and Algorithms problems**, sharpening problem-solving and coding efficiency.
- Earned a **Gold Medal** in Team Debating and **Silver Medal** in Essay Writing at the World Scholars Cup, and a **Bronze Medal** in horse riding.
